

PRESS RELEASE

KWANZA BUILDING LAUNCH – LUANDA, ANGOLA

The event marking the official launch of the **Kwanza Building**, a project developed jointly by Imoconstrói, Tecproeng, BPC and Design Resorts will be taking place on September 15th at 7.30pm at the Indiamia Hotel complex.

The Kwanza Building, catering to the most demanding and sophisticated property buyers in the Luanda market, is a modern residential complex located at Rainha Ginga, an outstanding location in the city centre. The spacious and fully furnished 2 or 4 bedroom apartments feature private elevator halls. Owners will be granted full access to the select health club with a gym and outdoor swimming pool and the building is to be equipped with two weeks of treated water storage capacity, an autonomous power generator and a helipad on the building's rooftop.

The project features a Nuno Candeias and António Catarino Tavares (Tecproeng) signature design. The individual verandas allow residents to take full advantage of the view and Luanda's tropical climate. They also protect the interior from direct exposure to the sun, acting as a second skin to the building, which is both energy and environmentally efficient. The timelessness of the design is expressed through an ever present dialogue between the natural environment and the city's traditional architecture and is accentuated by the elegant and careful interior design, projected by Lisbon Interior Designer Margarida Fezas Vital.

Construction is due to be launched in the second quarter of 2010 and properties will be promoted through local and international real estate agents; Propricasa, Imourban and Revelium, as well as, individual realtors focused specifically on the exclusive and high-end market the Kwanza Building is looking to accommodate.
